| 2.7 Total (Item 2.7 = sum of (row (m) of items 2.1 to 2.5) + item 2.6) | | | | | | | | | | | |
| (a) Of which securitization (exclude re-securitization) exposures | | | | | | | | | | | |
| (i) rated | | | | | | | | | | | |
| (ii) unrated | | | | | | | | | | | |
| (b) Of which re-securitization exposures | | | | | | | | | | | |
| (i) rated | | | | | | | | | | | |
| (ii) unrated | | | | | | | | | | | |
| 2.8 Total market risk capital charge for specific risk (Item 2.8(9) / 2.8(10) = Item 2.7(9) / 2.7(10) multiplied by scaling factor 1.06) | | | | | | | | | | | |
| 3. Total | | | | | | | | | | | |
| - Position col. (3) to (6): Item 1.4 + item 2.7 | | | | | | | | | | | |
| - Market risk capital charge col. (9) & (10): Item 1.4 + item 2.8 | | | | | | | | | | | |

B. Capital deductions

| | Positions incurred as an investing institution | Positions incurred as an originating institution | Total |
|---|--|--|-------|
| | (a) | (b) | (c) |
| 1. Gain-on-sale arising from securitization transaction as an originating institution | | | |
| 2. Other exposures as specified by the Monetary Authority | | | |
| 3. Total deductions | | | |

- Note: (1) Securitization exposures include re-securitization exposures unless otherwise stated.
- (2) During the transitional period (securitization) of 1 January 2012 to 31 December 2013, both dates inclusive, the applicable total market risk capital charge for specific risk (i.e. column (11)) for the interest rate exposures of a reporting institution is calculated as the larger of the market risk capital charge for the long positions (i.e. column (9)) or the market risk capital charge for the short positions (i.e. column (10)). Upon the expiry of the transitional period (securitization), the applicable total market risk capital charge for specific risk (i.e. column (11)) of the institution is calculated as the sum of the market risk capital charge for the gross (i.e. long + short) positions (i.e. column (9) + column (10)).
- (3) STC(S) approach means the method of calculating credit risk for securitization exposures under the standardized (securitization) approach.
- (4) IRB(S) approach means the method of calculating credit risk for securitization exposures under the internal ratings -based (securitization) approach.
- (5) "Rated securitization exposures" means exposures with an ECAI issue specific rating under STC(S) approach and IRB(S) approach, or in the absence of an ECAI issue specific rating, an inferred rating under IRB(S) approach.
- (6) "Unrated" securitization exposures means securitization exposures other than rated securitization exposures and those treated as if not rated for regulatory capital purposes.

Note: (1) For debt-related option contracts, the delta-weighted positions should be reported above or, if the reporting institution engages only in the purchase of option contracts as defined in the completion instructions, such option contracts can be carved out and reported in Division E.1.

(2) During the transitional period (securitization) of 1 January 2012 to 31 December 2013, both dates inclusive, the applicable market risk capital charge for specific risk (i.e. Item 1.17) for the interest rate exposures of a reporting institution is calculated as the larger of the total market risk capital charge for the long positions or the total market risk capital charge for the short positions reported in the last column of Item 1.16. Upon the expiry of the transitional period (securitization), the applicable market risk capital charge for specific risk (i.e. Item 1.17) of the institution is calculated as the sum of the market risk capital charge for the gross (i.e. long + short) positions reported in the last column of Item 1.16.

- (1) Where a commodity swap contract involves a leg requiring the receipt or payment of fixed or floating rate interest, that leg should be regarded as an interest rate exposure and reported in Division A.2, with the commodity exposure being included in the particular commodity above.
 - (2) For commodity-related option contracts, the delta-weighted positions should be reported above or, if the reporting institution engages only in the purchase of option contracts as defined in the completion instructions, such option contracts can be carved out and reported in Division E.1.
 - (3) The reporting institution should use separate form(s) for reporting of items 3 to 10 above if the rows of this form are not enough.

Division E: STM Approach - Option Exposures

E.1 Simplified approach *(For reporting institutions which purchase only option contracts as defined in the completion instructions.)*

1(a) Long option contract with a related position in the underlying exposure of the option contract

Report the market risk capital charge for each option contract as well as the related position in the underlying exposure below.

Market risk capital charge = (Fair value of the underlying exposure of the option contract) x (Sum of the market risk capital charge factors for general market risk and specific risk for the underlying exposure) – (The amount by which the option contract is in-the-money)

E.1 Simplified approach *(For reporting institutions which purchase only option contracts as defined in the completion instructions.)*

1(b) Long call or long put option contracts

Report the market risk capital charge for each option contract below. Such market risk capital charge should be the lesser of (i) the fair value of the underlying exposure of the option contract multiplied by the sum of the market risk capital charge factors for general market risk and specific risk for the underlying exposure of the option contract and (ii) the fair value of the option contract.

- Note: (1a) A reporting institution must use the STM approach to calculate the market risk capital charge for specific risk for the following specific risk interest rate exposures irrespective of the approach it adopts for calculating the VaR and stressed VaR for general market risk and (where applicable) specific risk for those exposures:
- (a) securitization exposures which fall within section 286(a)(ii) of the Banking (Capital) Rules;
 - (b) exposures which fall within section 286(a)(iii) of the Banking (Capital) Rules (i.e. correlation trading portfolio) but for which the institution does not have the approval of the MA to calculate a comprehensive risk charge; and
 - (c) nth-to-default credit derivative contracts which fall within section 286(a)(iv) of the Banking (Capital) Rules.
- (1) For VaR and stressed VaR, the total reported under the individual items is not necessarily equal to the sum of their respective components because of the correlation across the risk categories.
- (2a) If the stressed VaR as at the end of the reporting quarter is not available, reporting institutions should report the latest available stressed VaR in the relevant cells.
- (2) The multiplication factor is the sum of (i) the value of three; (ii) the plus factor based on the number of back-testing exceptions for the last 250 trading days based on the VaR (but not the stressed VaR); and (iii) any additional plus factor assigned to the institution by the MA.
- (3) If a reporting institution uses one internal model to calculate both the market risk capital charge for general market risk and market risk capital charge for specific risk, the institution does not need to report its calculation for general market risk and specific risk separately. The figures reported in Section (a) in respect of general market risk can cover both general market risk and specific risk, and the institution is not required to complete Section (b) in respect of specific risk.
- (4) The scaling factor is 1 or such other value as the MA may specify in a notice in writing given to the institution.
