

China CITIC Bank International's new mobile app inMotion pioneers Hong Kong's first remote account opening service

China CITIC Bank International Limited's newly launched mobile app inMotion offers various mobile banking services including non-face-to-face onboarding and remote account opening alongside time deposit, foreign exchange, funds transfer, account overview as well as eStatement and eAdvice services.

inMotion adopts various ground-breaking technologies. For instance, inMotion uses artificial intelligence to complete a non-face-to-face know-your-customers process for identity and document verification on a mobile phone; optical character recognition for reading the information on such identity documents and autofill; facial recognition for validating the holders of such documents; and liveness check to prevent fraudulent attempts by photo spoofing.

Updates and enhancements will arrive with other services in due course. This will include investment account opening for trading stocks and funds.
